

ECON 8320 – Tools for Data Analysis

Assignment 2 [25 points]

In order to become more familiar with functions in Python, we will write some functions to solve various problems that will become important as we move further into data analytics. Write functions that can complete the following:

1. Find the largest (or smallest) number in a list of any size
2. Sort a list of numbers WITHOUT using the sort functions built into Python
3. Sort a list of words, ignoring upper and lower cases
4. Use the csv module (documentation at <https://docs.python.org/3/library/csv.html#module-csv>) to read a csv file, and store only the row with the largest number in the third column. Be sure to store the entire row, though!
